Such disputes are common in the existence of commercial organizations in general. The outcome of these disputes is not likely to substantially affect the performance or profitability of the company.

2. Possible Delay in Project Implementation

Significant Capital Expenditure is required to be incurred for the purpose of setting up new manufacturing facilities & expansion/restructuring of existing facilities. The capital expenditure plans are subject to a number of variables, including possible cost overruns, construction/development delays or defects, receipt of critical government approvals, availability of financing on acceptable terms and changes in management's views of the desirability of current plans, among others.

MANAGEMENT PERCEPTION: The Company has in place the Project Implementation teams consisting of highly skilled and experienced personnel, with an excellent track record of completing the projects within the cost and time parameters as per the Project Report. Adequate allowances have been made in the Implementation Schedule for normal slippage. Barring unforeseen circumstances, the company is confident of completing the projects on schedule.

3. Statutory Approvals from Government and Regulatory Authorities are required in the ordinary course of business and failure to obtain the same may adversely affect the operations.

The company requires certain approvals, licenses, registrations and permissions for operating the business, some of which have expired and for which the Company has either made or is in the process of making an application for obtaining the approval or its renewal. Please refer section "Government Approvals" on page 141 for details. Delays in obtaining these approvals/renewals will adversely affect the business.

6. Deployment of funds Pending Utilization

There is no independent agency to monitor deployment of funds pending utilization for the project.

MANAGEMENT PERCEPTION: The Company has an effective mechanism for monitoring the implementation of the projects to be executed as well as deployment of funds. Pending deployment, proceeds of the issue will be invested in high quality, interest bearing liquid instruments including deposits with banks for necessary duration and investment in debt mutual funds and Government Securities and for reduction of Working capital requirements.

7. Restrictive Covenants in Loan Agreements

There are restrictive covenants in the agreements for short term and long-term borrowings from banks, among other things, which require the Company to obtain the approval of these banks or provide restrictions, namely for, change in shareholding pattern or capital structure issuing new securities (debt or equity), change in management, effecting mergers, consolidations or sales of assets, undertaking material diversification in the business of other companies or creating subsidiaries or making certain investments.

MANAGEMENT PERCEPTION: There are no unusual covenants apart from standard covenants imposed by all institutional lenders in India. The Company views them as agents for ensuring fiscal discipline rather than restrictive covenants hampering operational flexibility.

8. Funds Not For Any Specific Project:

The funds are being raised to relocate and consolidate existing facilities, the Projects of Nitro and Hydrogenation Rationalisation, Projects of Imaging Chemicals/ Speciality Chemicals/ Life Science Intermediates, for strategic investments and acquisitions, for General Corporate Purposes and to meet the rights issue expenses. The proceeds from the issue have not been linked directly to any particular project.

MANAGEMENT PERCEPTION: The Company operates in a highly competitive industry and to keep abreast of competition needs to relocate, consolidate and expand the manufacturing facilities and also set up new projects from time to time. The Company has got a definite strategy and road map based on which the Projects are envisaged over a period of two years. However, it is difficult to link the proceeds with the Projects for the priorities or contingencies affecting us due to the rapid shifting developments in the industry. The Project execution /activities etc. are planned in such a manner that the total outflows for various projects/acquisitions etc are tied up with the total inflows including proceeds from the right issue, internal accruals etc

9. Part of Issue Proceeds amounting to Rs 4000 lacs to be utilized for Acquisitions and Strategic alliances:

The Company has earmarked Rs 4000 Lacs for acquisition and strategic investments. Company's acquisition plans are in nascent stage and the target companies have not yet been identified.

MANAGEMENT PERCEPTION: The Company has accepted acquisition as one of the strategy it would adopt for growth in the areas of Business where the Company is focussing on. While identifying any new acquisition the Company would weigh the pros and cons in terms of Project cost savings and time saving vis-à-vis setting up a "Greenfield project ". Accordingly, the Company would be looking for suitable opportunities of acquisitions, joint ventures or any other strategic investments in the identified growth areas. The Company proposes to engage a strong Management team for analysis and due diligence prior to acquisition. The acquisition strategy will be formulated shortly.

10. The capital expenditure mentioned in the Objects of the Issue has not been appraised by any bank or financial institution.

The Company has planned significant capital expenditures; the capital expenditure plans may not yield the benefits intended.

MANAGEMENT PERCEPTION: The operations of the Company requires significant capital expenditure. The figures in the capital expenditure plans are based on Managements estimates and have not been appraised by

any banks/financial institutions or other independent organization. However, keeping in view the experience of the Promoters, the management is confident of achieving the growth envisaged.

One of the means of finance includes proceeds from sale of land at Pune. The Company is yet to enter into a formal Agreement for the same.

MANAGEMENT PERCEPTION: The Board of Directors of the Company at its meeting held on 16th December 2005 has decided to sell the factory plot located at Pune. 12. Non- Exercise Of Warrants:

The funds raised through conversion of Warrants have been considered for the objects of the issue. In case of non-exercise of warrants, the Company may not be able to meet its fund requirements.

MANAGEMENT PERCEPTION: In case of Non-Exercise of Warrants, the company will make arrangement for alternative sources of funds by Internal Accruals or by additional borrowings . The Company's Balance Sheet is strong enough for such purpose.

13. Warrant Conversion Price:

The Conversion price of the warrant is not indicative of the future market price of the Equity shares of the Company.

MANAGEMENT PERCEPTION: Warrant conversion price has been fixed at Rs 250 per warrant. The investor may note that this should not be construed as an indicative market price of the equity shares of the company, whether presently or after the equity shares are issued upon the exercise of the warrants are listed. No assurance can be given regarding the active /sustained trading in the equity shares or the price at which the equity shares offered under the present Issue will trade either after listing or at the time of exercise of warrants.

Most of the Products manufactured today are developed in-house. The Company has received Sir P. C. Ray award for the outstanding development of indigenous technology.

15. Significant Dependence on a Single or Few Suppliers or Customers:

Supplier: The company has tied up for the supply of hydrogen , which is one of the key raw materials with a group company Deepak Fertilisers and Petrochemicals Corporation Ltd. (approx. purchase of 52% of its total hydrogen consumption based on April 05 to Sept 05 consumption)

Customer: As per the Provision in the long-term supply contract/Agreement of 5 years for one of our products, the Customer has informed about foreclosure w.e.f. 31.12.05 though the validity of the agreement is till 31.12.06. The foreclosure amount is USD 4.80 Million approximately Rs 21.60 crores.

MANAGEMENT PERCEPTION: In case of non-supply of hydrogen from Deepak Fertilisers and Petrochemicals Corporation Ltd. in the event of plant break down/force-majure condition, the company has created a facility to consume bottled hydrogen. This will enable the company to maintain a major part of production although at an additional cost.

Our Plant is of multipurpose nature and can make other fine chemicals with minor reconfiguration. As such in regard to foreclosure of the agreement the company has opened dialogues with other consumers and is hopeful of utilising the capacity by next year for the same product or alternative product in the multi-product plant.

16. Mishaps or accidents at the Company's facilities could lead to property damage, production loss and accident claims

MANAGEMENT PERCEPTION: The Company has adequate insurance cover against all such risks. Strict adherence to all regulatory requirements is maintained at all the locations at all times. The company pays more emphasis on safety at work places by adopting adequate engineering practices in design and operations.

17. Likelihood of Discontinuance of Employment by Key Technical and R & D Personnel

The Company's prospects depend on in-house product and process development to achieve competitiveness and hence to that extent its growth prospects depends upon the continued contribution from its key technical and R & D personnel.

MANAGEMENT PERCEPTION: The Company recognises R&D as a growth driver for future and has created a challenging and intellectually stimulating R&D work environment, which also rewards innovation. This ensures that the Company is able to attract and retain best of talent. Recognising the international focus, the Company has a right mix of Scientists and Engineers with blending of research and industrial experience in India as well as overseas. The Company has association in form of sponsored projects/consultancy arrangements with well-known research institutes and academic laboratories in India.

18. Anti Dumping Levies

The Company has anti-dumping duty levied on one of the major finished products supplied from China. Withdrawal of the same may affect performance of the Company adversely.

MANAGEMENT PERCEPTION: The Company's petition to DGAD for continuation of anti-dumping duty against the import of the product from China has been accepted. The Department after proper scrutiny has re-levied the anti-dumping duty for a further period of 5 years.

19. Losses by Promoter/Group/Associate Company

The following group companies have incurred losses during the following periods:

(Rs in Lacs)

Name of the Company	Profit/(Loss) for year ended March 2005	Profit/(Loss) for year ended March 2004
Deepak Agro Solutions Ltd	(168.41)	(45.07)
Sapna Investments Pvt. Ltd	(0.10)	8.71
Signassure Services India Ltd	(0.55)	(0.92)
Yerrowda Investments Ltd	(57.94)	(56.18)
Lakaki Works Pvt. Ltd	(7.07)	42.97
Name of the Company	Loss for the period ended 31 st July 2004	
Deepak International Limited	6,743 UK Pound	

MANAGEMENT PERCEPTION: Since the above entities are independent companies, the losses will not have any impact on the performance of the Company.

20. The Contingent Liabilities of the Company as on 30th September 2005 and 31st March 2005 are as mentioned hereunder

Particulars	As on 30.09.2005	As on 31.03.2005
Disputed Income Tax, Sales Tax and Excise liabilities	Rs. 394.53 lacs	Rs 317.42 lacs
Unexpired Guarantee/Counter Guarantee	Rs. 28.67 lacs	Rs 51.76 lacs
Bill Discounted	Rs. 6.98 lacs	Rs. 457.10 lacs
Pending legal Cases	Rs. 1088.07 lacs	Rs 1088.07 lacs

MANAGEMENT PERCEPTION: The major chunk of the above contingent liability is on account of demand raised by the Commissioner of Customs for Rs. 1001.38 lacs. This case pertains to two value based advanced licenses obtained in the year 1992 & 1994 on which the Customs Dept has raised demand for entire License value and penalty of 100% of the License value. The High Court vide its order dt. 7th April, 2005 has remanded back the matter to CESTAT for the case to be heard on merits. CESTAT vide its order dt. 10th November 2005 has stayed the recovery and waived the pre-deposit of duty and penalty pending final hearing of the case.

In respect of the proceedings initiated by the Gujarat Pollution Control Board, the Supreme Court has since remanded back the matter to the high court of Gujarat to re-examine the compensation of Rs. 86.69 lacs awarded earlier, after considering as to whether any damage was caused due to alleged degradation to the environment.

As for the disputed tax liabilities the Company does not foresee the possibility of such liabilities crystallizing to a material extent so as to adversely affect the financial performance.

21. Pending Patent Application:

The Company has applied for a Patent of an invention titled "An improved process for preparation of Anti-Fungal, Anti-Wood Borer and Anti-Termite Fomulations" with the Controller of Patents, Mumbai. The said application is pending grant of patent.

RISK FACTORS EXTERNAL TO THE COMPANY:

1. Price volatility in crude based raw materials.

The Company consumes raw materials which are crude based and hence there is high volatility in price.

MANAGEMENT PERCEPTION: Most of the Products of the Company are intermediates and as such the volatility affects one and all in the industry, hence these are generally passed on to the final customer. DNL will have same level playing field in the supply of crude oil based raw materials as that of other producers world-wide.

Further, because of diversified Product portfolio, the Company is in a position to pass on the increase in cost to the customers. Also, the long term contracts of the company are signed with a link to raw material price fluctuations to minimize the impact of raw material price fluctuations.

2. Regulations of exports and imports.

The export share of total turnover of the Company is growing and hence any change in regulations will affect the performance of the industry as a whole.

MANAGEMENT PERCEPTION: Overall changes in regulations in respect of Export and Import is a phenomena applicable to all the companies across the industry. Under WTO, Regulations have to be on similar footing across the industry. Furthermore, in case of change of export incentives, DNL is in a better position to switchover to maximising import of raw materials.

DNL is in a better position to respond to such changes by changing the overall product mix or adjusting the procurement policies.

3. Stability of Government Policies and Political Situation in India.

The Company's performance may be affected by the changes in the Government Policies arising out of change in the political situation.

MANAGEMENT PERCEPTION: The Company perceives that impact of the same will be minimal since it has been demonstrated that there is a continuity in the industrial and economic policies on liberalization under any government/political party. Further, the Company also has diversified manufacturing locations in two different states which gives it an edge to maintain uninterrupted supply in case of unforeseen political /economic situation.

4. Effect of competition in a Globally Competitive Environment

The Company operates in a globally competitive business environment. Growing competition may force it to reduce the price of its products which may reduce its revenues and margins and /or decrease its market share, either of which could have a materially adverse effect on the business, financial condition and results of operations.

MANAGEMENT PERCEPTION: Competitive environment is a fact of life. However, our diversified manufacturing expertise and proven ability of innovation and new products development further coupled with long term relationship with major MNCs based on satisfactory performance ensures strong customer loyalty. In addition, this opens up new rewarding opportunities as some of the products come under pressure on margins. Therefore, the company is in a better position to respond to such changes by changing the overall product mix, and adjusting its pricing policies in respect of the other products.

5. Changes in the Domestic Tax Laws

Any change in the tax laws in India, particularly income tax, might lead to increased Tax liability of the Company, thereby putting pressure on profitability.

MANAGEMENT PERCEPTION: The Company feels that the tax laws and tax rates have reached a level of maturity and stability, where unusual hiccups drastically impacting the profitability of companies are not likely to take place.

6. Foreign Exchange fluctuation

The company has got significant turnover from exports. Strengthening of currency will affect the performance adversely.

MANAGEMENT PERCEPTION: The company imports large quantity of raw materials for export based products. Therefore, it has natural hedge on Exports. Also to mitigate the effect of exchange loss, the company has borrowed in foreign currency both for its term loan and working capital. These also gives additional hedge to the company.

7. Volatility of Share Price

After the Rights Issue, the price of the Equity Shares may be highly volatile and may fluctuate significantly due to many factors, including variations in the operations of the Company and changes in the regulatory environment.

The prices of the Equity Shares on the Indian Stock Exchanges have fluctuated in the past and may continue to fluctuate after the Rights issue as a result of several factors, including:

- Volatility in the Indian and global securities markets;
- Results of operations and performance in terms of market share;
- Contracts, acquisitions, strategic partnerships, joint ventures, or capital commitments;
- Changes in the estimates of Company's performance or recommendations by financial analysts;
- Significant developments in India's economic liberalisation and deregulation policies;
- Significant developments in India's fiscal and environmental regulations;

8. Pollution control

Failure to comply with environmental laws, rules and regulations may adversely affect the company's operations.

MANAGEMENT PERCEPTION: The company is not only complying with all the regulatory norms for environment control, but it has also been a signatory to the RESPONSIBLE CARE initiative. Adequate control is exercised at all units. Strict adherence to all regulatory requirements is maintained at all times. The Company has received ISO 14001 certification for its Nandesari Division during the year.

SECTION III : INTRODUCTION

I. SUMMARY

(i) Summary of the Industry and Business of the Company

Investors should read the following summary with the Risk Factors appearing on page number vi of this Letter of Offer and detailed information about the Company and its financial statements included on Page No 87 of this Letter of Offer.

INDUSTRY:

INDIAN CHEMICAL INDUSTRY:

Chemical industry is one of the oldest industries in India. It not only plays a crucial role in meeting the daily needs of the common man, but also contributes significantly towards industrial and economic growth of the nation. The industry, including petro-chemicals, and alcohol-based chemicals, has grown at a pace outperforming the overall growth of the industry.

Global Scenario

The global chemical market is estimated at approximately USD 1.7 trillion*. Western Europe is the largest chemical-producing region followed by North America and Asia. It is knowledge-based industry with significant investment in R&D. The industry supplies to virtually all sectors of economy and produces more than 80000 products.**

(*Source: ICMA, ** Source: Government information sites)

Some of the emerging trends in the global chemical industry that can be leveraged for growth are:

- Increasing globalization as growth in mature markets drives the leading players to explore new developing markets.
- Consolidation to leverage economies of scale in the basic and knowledge segments.
- Increasing focus on core businesses, resulting in diversified chemical and multi-product companies divesting businesses or exiting non-core product lines.
- Cost optimization assuming critical importance in the face of slow growth coupled with a pressure on prices due to competition.
- Increasing investments in R&D (especially in speciality and knowledge segments) to gain competitive advantage.
- Increasing use of IT to transfer business – intra-company and across the extended supply chain.

Indian Scenario

The Indian Chemical Industry ranks 12th by volume in the world production of chemicals. The industry's current turnover is about USD 30.8 billion (Rs 13.86 lacs mn) which is 14% of the total manufacturing output of the country & the export of chemicals constitutes to about 13% of the country's total export. Substantial proportion of these exports goes to the USA, Europe and other developed nations. Its contribution to the national revenue by way of custom and excise duties is about 20%. India is strong in basic chemicals that go into production of consumer items like paints, dyes, soaps, medicines, toiletries, cosmetics, etc.

Indian Chemicals Industry is characterized by its large fragmentation in both small and large scale units. The fiscal concessions granted to small sector in mid-eighties led to establishment of large number of units in the Small Scale Industry (SSI) sector. Currently, the Indian Chemical Industry is in the midst of major restructuring and consolidation phase.

With the shift in emphasis on product innovation, brand building and environmental friendliness, this industry is increasingly moving towards greater customer-orientation. Even though India enjoys an abundant supply of basic raw materials, it will have to build upon technical services and marketing capabilities to face global competition and increase its share of exports.

In terms of consumption, the chemical industry is its own largest customer and accounts for approximately 33% of the consumption. In most cases, basic chemicals undergo several processing stages to be converted into downstream chemicals. These in turn are used for industrial applications, agriculture, or directly for consumer markets. Industrial and agricultural uses of chemicals include auxiliary materials such as adhesives, unprocessed plastics, dyes and fertilizers, while uses within the consumer sector include pharmaceuticals, cosmetics, household products, paints, etc.

Inorganic chemicals constitute to about 8% of total chemical turnover. Inorganic chemical industry is essentially domestic demand driven. Consumption of inorganic chemicals like caustic, chlorine find application across entire section of chemical industries and hence result in high capacity utilization and energy efficient operation.

India also produces a large number of fine and speciality chemicals, which have very specific uses and are essential for increasing industrial production. These find wide usage as food additives, pigments, polymer additives, anti-oxidants in the rubber industry, etc.

Organic, fine & speciality chemicals are used to produce advance intermediates and active ingredients for pharma as well as agro-chemical industry. This Sector has shown significant growth over last decade and now taken a global market share.

The Dyestuff sector is one of the important segments of the chemicals industry in India, having forward and backward linkages with a variety of sectors like textiles, leather, paper, plastics, printing ink and foodstuffs. The textile industry accounts for the largest consumption of dyestuffs at nearly 80%. India has emerged as a global supplier of dyestuff and dyes intermediates, particularly for reactive, acid, vat and direct dyes. As far as global production of dyes is concerned, India accounts for 6% of the world production.

Chemical fertilizers and crop protection chemicals played an important role in the "Green Revolution" during the 1960s and 1970s. The consumption of pesticides in India is low in comparison to other countries. Indian exports of agrochemicals have shown an impressive growth over the last five years.

The key export destination markets are USA, UK, countries of European Union, South Africa, Japan, Korea, China, Malaysia, Singapore, Australia and South America.

Traditionally, the creation of capacities has been ahead of the demand over the past few decades, chemical industry has been witnessing acute competition in pricing. However, in the recent years, creation of further capacities has slowed down, bringing about a balance in the demand supply position.

BUSINESS OF THE COMPANY:

Back Ground

About the Company and its business

Deepak Nitrite Limited (DNL) – the flagship company of the Deepak Group of Companies – has come a long way since it was set up in the 1970s to support India's drive towards self-sufficiency and import substitution. Today, revenues from its exports to over 20 countries, including the US, Japan, Korea and Europe, contribute almost 43% of its turnover of Rs. 321 crore. DNL has last year crossed turnover of Rs 138 crores in exports. For the year 2004-05, exports rose an impressive 23% over the previous year to close at Rs.138 crores, driven by the strong performance of exports of Organic/fine chemicals. However, the company has no plans to rest on its laurels and has already set sights on the next milestone of achieving a target of 50% of its turnover from exports.

Moving up the value chain

The DNL saga began way back in the 1970s. Mr. C K Mehta, a budding entrepreneur, set up a small chemical manufacturing unit in Gujarat. In 1970, he set up a plant at Nandesari, near Vadodara in Gujarat, for manufacturing two import substitutes – sodium nitrite and sodium nitrate – using indigenous technology. At that time global suppliers like BASF, Du-pont and ICI, were supplying a bulk of the sodium nitrite and by manufacturing these two chemicals indigenously, DNL managed to make its presence felt in domestic market. From these humble beginnings, DNL has grown continuously across the value chain by forward, backward and lateral integration. Today, it manufactures inorganic, organic and fine & speciality chemicals catering to the needs of a host of industries, from textiles and pharmaceuticals, to rubber, agrochemicals, paints, dyes, explosives, glass, paper and cosmetics. The company is now focused on making its plants more flexible to switch from intermediaries to speciality chemicals and to progressively take to customization. Over the years, it has successfully and seamlessly moved from being a commodity-oriented, bulk volume product company to a fine intermediate company.

Multi-locational manufacturing facilities

DNL has three manufacturing facilities at different locations in the western part of India – one at Nandesari, Gujarat and two in Maharashtra at Taloja and Roha. The inorganic chemicals are produced only in Gujarat, while organic and fine & speciality chemicals are produced at the facilities located across Gujarat & Maharashtra. One of the facilities is devoted predominantly to hydrogenation and reductive alkylation. In inorganic chemicals, the major products manufactured include nitrites, nitrates, blowing agents, hydroxylamine derivatives, while in organic chemicals the major products include nitrochlorobenzenes, nitrotoluenes, toluidines, xylidines and cumidines. While the company's main strengths are in nitration, chlorination and hydrogenation, DNL also has the technical capabilities to carry out many other reactions at its plants. Products like DEMAP, Resorcinol and intermediates for agro/pharma/imaging chemical industry constitutes its Fine & Speciality segments.

Growing through acquisitions and restructuring

DNL immensely benefited by acquiring companies whose product lines complemented its own. In 1984, it acquired Sahyadri Dyestuffs & Chemicals Division. Located at Vithalwadi, Pune. This division produced a whole range of innovative intermediates for colorants and imaging chemicals. In light of fast development of Pune city and adjoining areas further coupled with environmental and financial impacts, it is difficult to foresee a continued growth in production at Pune Plant. Therefore, the Board of Directors has decided to relocate this unit. Some of the factors which has forced us to relocate this plant are :

- Environmental concerns and rapidly growing urbanisation of areas surrounding the factory
- Logistic issues in relation to handling of chemical products within Urban location.
- Restriction on expansion plan
- High Taxes and additional cost like octroi in city limits
- Shifting of Facility will help in bringing proximity to our main user industries and other cost savings including proximity to Economical port area. It also gives us advantage to expand and modify our product line to achieve economy of scale.

In 2000, DNL acquired Aryan Pesticides Ltd., the agrochemical intermediate producer company located at Roha in Maharashtra to boost its speciality chemicals business. APL Division is India's largest producer of p-cumidine and the only manufacturer of xylidines in the country. The acquisition brought about synergy in three areas:

- Inputs - as Aryan was DNL's largest customer for nitrochlorobenzene;

- Technology - Chlorination, Nitration and Hydrogenation were the main processes used at Aryan. DNL has established Superior expertise in these technologies.

Customers - Erstwhile Aryan's existing Customer base for its APL Products had a good strategic fit with that of DNL's Customers.

Investing in research

R&D has been an integral part of DNL's growth. In 2004-05, DNL spent over Rs. 230 lakhs on its R&D activities, which constitutes around 1% of its turnover. Many of its products have been developed at its central R&D facility at Pune, the Deepak Research & Development Foundation (DRDF). Approved by the Government of India, Dept. of Science & Technology, the center is primarily engaged in research and process development for new products, as well as optimization of the manufacturing process for existing products. Situated at Pune, it encompasses a sophisticated analytical laboratory and facilities for testing new technologies and new products.

The Centre works in close association with reputed universities and research institutes of India like the University Institute of Chemical Technology, Mumbai, National Chemical Laboratory, Pune and the Indian Institute of Chemical Technology, Hyderabad. DNL is also active in custom manufacturing and works with leading companies under strict agreements of confidentiality for development and manufacture of highly-specialised products for their specific requirements.

The company's strengths in this area include years of in-house expertise and a proven track record of innovation and indigenous development.

Going global

After crossing Rs. 138 crore turnover mark from its international business this year, the company foresees a quantum leap in export turnover through custom manufacturing for the specific needs of end-users and manufacture of high-value, speciality products, either based on its own end-products or developed especially for the user. Apart from a hike in R&D and capacity expansion, DNL has adopted a business model for growing its international business – exclusive development of new products at its R&D Centre followed by becoming exclusive suppliers to large companies. The company is looking at doubling the revenue from long-term or exclusive contracts abroad to 70% of total exports. For DNL, international business has been growing at a faster rate and is considered less volatile than the domestic business. But it certainly is not ignoring the domestic market. DNL has strength in Domestic market also and is having one of the largest numbers of end-product customers. This approach has indeed paid dividends to DNL in the past few years and is expected to help the company scale new heights of success in the future.

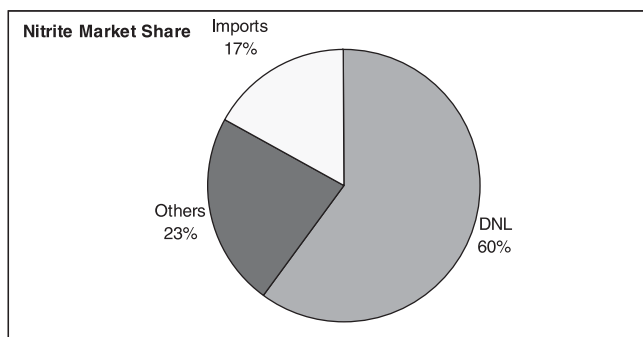

Company's operations are broadly divided into three business segments -

- Inorganic Intermediates
- Organic Intermediates
- Fine & Speciality Chemicals

The brief details of each segment of the company mentioned above is given below:

Inorganic Intermediates

DNL is India's largest producer of sodium nitrite and sodium nitrate by the ammonia oxidation process. Sodium nitrite forms the raw material for several other value-added products manufactured by the company such as hydroxylamine derivatives, oximes, alkylated hydroxylamine and a rubber-blowing agent. The company has expertise to safely handle bulk and hazardous chemicals. The manufacturing facility is located at Nandesari near Vadodara, Gujarat.

Source: Chemexil

Over last 3 decades DNL is leader in sodium Nitrite domestic market, holding about 60% of the market share. Cost leadership, supported with well-entrenched market network & customer understanding has seen steady rise in market share for DNL. Company has also been strategically catering to other international markets like Gulf, Europe and East Asia.

Organic Intermediates

The major products of this segment are basic building blocks like mono-chloro benzene, nitro-chloro benzene, nitro-toluene, nitro-xylenes, nitro-cumenes. This makes it one of the largest consumers of aromatic commodities like BTX and cumene in India. DNL has highly automated multipurpose nitration and isomer separation facility, which produces nitro-chlorobenzenes, nitro-xylenes, nitro-cumenes and nitro-toluenes. Majority of these nitrated products, are captively consumed in-house to reduce further to produce a range of aromatic amines. This reduction step is based on a cost competitive catalytic hydrogenation technology developed in-house. The product line has been enhanced to include new products based on the reductive alkylation process and ring hydrogenation. These manufacturing facilities are based at Nandesari in Gujarat, Taloja and Roha in Maharashtra.

DNL achieved global leadership in some of its products like cumidine and xylidine used in Agro and Pigment intermediates. by aggressively positioning its products in this competitive segment and becoming a proven and reliable Supplier under a long term contract with major MNCs.

Fine and Speciality Chemicals

This segment produces a broad and innovative range of imaging & colourant intermediates and fine chemicals, based on its expertise in alkali fusion, halogenation, alkylation and sulfonation. It also manufactures speciality intermediates used in paper chemicals, pigments, agro, pharma, dyes, optical brighteners, inks, rubber and UV absorbers. These manufacturing facilities are located at Pune and Roha, in Maharashtra. This segment specializes in developing & manufacturing exclusive intermediates or performance chemicals for major MNCs.

DNL has shown continuous improvement in market share of hydroxylamine derivatives and is currently occupying significant share of global business and in products like herbicides and strobilurins as a leading Supplier for herbicides and strobilurins. Over the years Company has consolidated its position as a major supplier of intermediates for color-formal/imaging chemical industry supplying a variety of alkylated aminophenols as well as diphenylamine class of compounds. DNL has been a leading producer and supplier of Resorcinol in India and has established a reliable customer base with all major tyre manufacturers, the main end use segment of this product. Company has also developed several value added derivatives of Resorcinol for international market. Agro intermediate that DNL manufactures find use in latest generation recently expired patented products.

3. DEMAP Derivatives and other Fine Chemicals Utility Shifting

Salient features of the Project :

- There are environmental concerns associated with future growth of the Pune plant at its present location. This is specifically because of the urbanisation of the areas surrounding our factory.
- The heightened concerns and overall approach of society towards manufacturing activity in general and specifically chemical manufacturing within city limits also puts pressure on logistic viz., loading/unloading and storage of chemicals and other logistic issues.

- It is a fact that the Government may not allow any expansion or growth at the present site since the nature of industry and product type are of chemicals nature. This has directly affected the profitability of the unit and in turn that of the Company.
- Octroi @ 3% within municipal corporation limits, have gradually eroded the margins available.
- Various overheads associated with the present location are beyond the control of the management, yet these locational disadvantages make it more difficult to effectively compete with cheap imports and other domestic manufacturers whose factories are located at low cost locations.
- There are other advantages in relocation of our facilities at SDC to Vadodara and Roha including proximity to our main user industries and other cost savings including proximity to Economical port area. It also gives us advantage to expand and modify our product line to achieve economy of scale.

2. BUSINESS OVERVIEW

Brief details about the manufacturing facilities of the company.

Inorganic Intermediates - Nandesari

The Inorganic Intermediates division located in Gujarat is India's largest producer of Sodium Nitrite, manufactured by the ammonia oxidation process. Sodium Nitrite is marketed as a merchant product and also constitutes the basic building block for value-added products such as Hydroxylamine derivatives and DNPT (Blovel), a rubber-blowing agent. This Division is now focusing on new high value products based on Nox chemistry and Redox process.

Organic Intermediates - Nandesari

Deepak Nitrite in early 90's set up a multi-purpose nitration plant with technology from Biazzi, Switzerland.

Located adjacent to the Nitrite Division at Nandesari in Gujarat, this Nitroaromatics Division produces a range of Nitrotoluenes and Nitrochlorobenzenes. The division's expertise extends beyond nitration to relevant Isomer Separation and isolation of pure individual components. Equipped with a sophisticated DCS controlled system, the division's end products are at par with highest international standards. This division also produces Monochlorobenzene for captive consumption.

Technology and Process

1. Resorcinol shifting to Vadodara

Technology

Existing Technology based on classical process involving Benzene sulphonation followed by alkali fusion and isolation of product after acidification. Company is intending to follow the same technology.

Process

Process involves batch sulphonation of Benzene using SO₃ & sulphuric acid. The sulphonated mass is neutralised using Caustic. The neutralised mass is dried. The Dried mass is reacted with Caustic soda under high temperature in a fusion kettle to produce resorcinol salt. This salt is acidified to give resorcinol. The resorcinol is isolated by extracting in solvent followed by solvent recovery & solid distillation of Resorcinol. The Molten resorcinol from distillation is flaked & packed.

2. DEM & DEMAP relocation to Roha

Technology

Existing technology was developed inhouse in R & D which involves ethylation of Metanilic acid followed by Alkali fusion and isolation of product after acidification.

Process

Process involved high pressure ethylation of liquid metanilic acid with Ethyl Chloride followed by isolation of alkaline ethylated mass by low temperature crystallisation. The crytallised product is filtered. The wet cake is reacted with Caustic Potash under high temperature in a fusion kettle to produce salt of DEMAP. This salt is acidified to give DEMAP. The DEMAP is isolated solvent crystallisation, filtration and drying.

3. SDC Utility & other Plant shifting

Technology & Process

These are low volume high value products multistep synthesis. The technology was developed inhouse in R & D center in the past. These products are being shifted to new location.

4. R & D & pilot plant shifting immediate & Final

Technology & Process

The Concept of R & D & pilot plant is similar to such setups running in Chemical plants. R & D will cater to process improvement in existing products as well as for development of new molecules. There will be provision kept for custom research opportunities in the future. Pilot plant has been based on the concept of testing these new products developed in scales ranging from few 100 kgs to a ton. There will be provision kept for any custom manufacturing opportunity in the future.

5. Multipurpose Nitration Stream

Technology

This technology has been originally bought from M/s BIAZZI. This involved continuous nitration in a series of reactors which operate in continuous process. The nitration product is separated in a series of distillation & crystallization modules. Hydrogenation technology has been developed inhouse.

Process

The process involves Nitration of organics in a series of reactors operating in continuous mode. The reactor series contains washing units to remove acids from the crude product formed. The washed crude product is sent to a distillation column where unreacted organic is stripped off. This mix Nitro mass is then sent to a set of distillation columns & crystallizers wherein the pure products are isolated.

In this project we are also planning to set up an independent facility for reduction of chloro-nitro compounds. The process is similar to one existing at Taloja. This principally involves catalytic reduction of Nitro Chloro compound followed by catalyst filtration & separated organic is sent to distillation for producing pure product.

6. Expansion of Imaging Chemicals intermediate

Technology

The present and the new technology for Imaging chemicals has been developed by inhouse R & D. The process involves multistep synthesis starting from Nitro Toluene & cresols respectively.

Process

Process for its manufacture presently involves Methoxylation, Bromination & subsequent condensation of cresol. The current process involves several manufacturing steps. In the new technology, the Company would be starting from Nitro Toluene instead of cresol. The process will involve a novel process of hydrogenation followed by condensation with a brominated aromatic compound. The crude product is distilled & isolated by solvent crystallization. The product is filtered, melted & flaked and packed.

7. Advanced Intermediates of Life-science & Speciality

Technology

The technology has been developed by inhouse R & D. The process involves multistep synthesis starting from Aromatic & straight chain organic molecules.

Process

Process will involve various steps such as hydrogenation, oxidation, coupling, rearrangement reactions etc. The end product will be isolated by Solvent Crystallization, Filtration & Drying.

Brief details about the manufacturing facilities of the company.

Nitrite Division

The Nitrite Division at Nandesari in Gujarat is India's largest producer of Sodium Nitrite, manufactured by the ammonia oxidation process. Sodium Nitrite is marketed as a merchant product and also constitutes the basic building block for value-added products such as Hydroxylamine derivatives and DNPT (Blove), a rubber-blowing agent. This Division is now focusing on new high value products based on Nox chemistry and Redox process.

Nitroaromatic Division

Deepak Nitrite in early 90's set up a multi-purpose nitration plant with technology from Biazzi, Switzerland.

Located adjacent to the Nitrite Division at Nandesari in Gujarat, this Nitroaromatics Division produces a range of Nitrotoluenes and Nitrochlorobenzenes. The division's expertise extends beyond nitration to relevant Isomer Separation and isolation of pure individual components. Equipped with a sophisticated DCS controlled system, the division's end products are at par with highest international standards. This division also produces Monochlorobenzene for captive consumption.

Taloja Chemical Division

Deepak Nitrite's Taloja Chemical Division, at Taloja (near Mumbai) in Maharashtra, manufactures aromatic amines based on in-house developed technology by catalytic hydrogenation. Continuous supply of hydrogen comes from our group company DFPCL. A recent expansion gives the division the capability to produce several new products based on Reductive Alkylation.

Aryan Pesticides Division, Roha

Deepak Nitrite's latest strategic acquisition is Aryan Pesticides Limited. Located at Roha, 120 kms from Mumbai, it is India's largest manufacturer of Paracumidine and the only manufacturer of Xylidines. With expertise in Batch Nitration, Chlorination, Alkoxylation and Hydrogenation, this plant has a synergy with Deepak Nitrite's core strengths and is poised to become a major launching pad for Custom Manufacturing of specialized new products.

There are three main segments in which the Company is manufacturing products. These are - Inorganic Chemicals, Organic Chemicals and Fine & Speciality Chemicals.

Plant & Machinery

Inorganic Intermediates -

The manufacturing plant is located at Nandesari in the chemical industrial zone near Vadodara, Gujarat. The main products of this segment are sodium nitrite, sodium nitrate, hydroxylamine sulphate and blovel brand of rubber blowing agents.

The manufacturing plant facilities consists of :

- (a) Facility for air oxidation of ammonia over noble metal catalysts
- (b) gas absorption towers to make sodium nitrite and sodium nitrate
- (c) various types of equipment for separating and crystallising solids, centrifuging and drying
- (d) other batch products are manufactured in typical stainless steel reactors with auxiliary equipment.
 - The manufacturing activities are supported by facilities to store gases like ammonia, sulphur dioxide, solvent storage tanks as well as elaborate loading, unloading and packaging facilities.
 - Supporting infrastructure for providing utilities like cooling towers, chilling plant, compressed air and nitrogen plant, water softening unit, scrubbers, etc.
 - The entire manufacturing site has been certified by KPMG under ISO 9001 as well as ISO 14001 quality management system.

Organic Intermediates

The manufacturing facilities for this segment are located at Vadodara, Roha and Taloja. The main products of this segment are mono chloro benzene, ortho nitro chloro benzene, para nitro chloro benzene, ortho para and meta nitro toluene, ortho and para cumidines and 2-4 and 2-6 xylydine. The major processes for this segment are chlorination, nitration and hydrogenation. The plants are basically stainless steel equipment for batch and continuous nitration, variety of packed columns for fractional distillation and sophisticated crystallisation for separation of solids. There is a facility for continuous chlorination of benzene.

There are sophisticated storage and handling facilities for loading, unloading, pumping variety of hazardous chemicals and solvents like hydrogen, chlorine, nitric acid, benzene, toluene, cumene, metaxylene, etc. There is also an adequate storage for the entire range of end products and facilities to despatch the material in drums or specialised ISO tanks.

Manufacturing facilities are approved as per ISO 9000 by KPMG.

Fine & Speciality Chemicals

The manufacturing sites for this segment are located at Vadodara and Roha. This business segment consists of several value added advanced intermediates required for agro, pharma, imaging and specialty chemical sectors. The key products are alkylated hydroxylamines and oximes, substituted alkylated amino phenols, resorcinol and its derivatives, substituted

diphenylamines, etc. All the processes are multi step batch operations carried out in stainless steel or glass lined reactors. Some of the equipments are capable of handling high pressure and high temperature reactions. These equipments are supported by appropriate auxiliary systems for distillation, solvent recovery, crystallisation, separation and drying. The plants are typical multi purpose and can switch over to any other product.

There are a number of storage vessels, tanks with appropriate pumping and delivery systems for the batchwise operation.

Supporting utility system like heating, cooling towers for chilled water, drying units for low temperature reaction, water softening unit, air and nitrogen plants, etc.

Technology

Inorganic Intermediates

The technology for these products has been developed in-house. The Company received the prestigious Sir P C Ray Award for indigenous development of this technology.

Organic Intermediates

The original technology for nitration and separation was licensed from Biuzzi. The hydrogenation technology to produce the respective aromatic amines has been developed in-house.

Fine and Speciality Chemicals

Process technology for all the products is developed in our R&D and scale up in the pilot plant. The manufacturing facilities were subsequently designed based on the above pilot studies.

Raw Material and Process

The Process for each of the segments is detailed in below-

Inorganic Intermediaries

Sodium nitrite and sodium nitrate are manufactured by air oxidation of ammonia followed by absorption of the NO_x gases in alkaline solution (caustic soda/soda ash). The resultant liquid containing the mixed products is further saturated and separated to sodium nitrite and sodium nitrate. The separated crystallised products are centrifuged, dried and packed to the required customer specification.

Hydroxylamine sulphate is produced by a classic Raschig process starting from sodium nitrite manufactured in-house. Sulphur dioxide is passed through the nitrite solution and the resultant product is further processed to remove sodium sulphate and ammonium sulphate. Hydroxyl amine sulphate is then obtained by crystallisation from this solution. The product is centrifuged and dried before packing as appropriate.

Organic Intermediates

The entire manufacturing plant has a sophisticated electronic instrumentation with computerised control system. The basic manufacturing process involves continuous nitration of benzene, toluene, metaxylene, cumene, etc. The resultant nitro mass is separated by elaborate distillation and crystallisation processes to give the desired isometric products of required purity. The aromatic nitric compounds are hydrogenated in batch hydrogen reactors to produce the respective aromatic amines (OT, PT, MT, xylidine, cumidine, etc). These products are then purified by fractional distillation.

Fine and Speciality Chemicals

Most of these products involve multi step manufacturing processes. The key unit processes are alkylation, alkali fusion, chlorination, bromination, condensation, catalytic hydrogenation, friedel crafts reaction, formulation, reductive alkylation.

COLLABORATIONS

There is no collaboration existing as on date.

INFRASTRUCTURE FACILITIES

● **Utilities**

Power

The Company draws power from GEB. Last year the Company had set up its own power plant based on natural gas from GAIL. This plant generates 2.8 MW of power and can cater to major power requirement of the site.

Water (Steam)

The boilers of the Company can be run on both furnace oil as well as natural gas, depending on availability and cost factors.

● **Environmental Matters:**

Inorganic Intermediate

The Company has elaborate treatment facilities at the site. Effluent generated during the process is treated as per the required standards of GPCB. The treated water is sent to the common effluent treatment plant for this industrial area. After further treatment the final outlet of this common effluent treatment plant is connected to the sea estuary through a dedicated pipeline. This site has recently been evaluated under ISO 14001 standards. The site has elaborate safety infrastructure and excellent management system for overall safety, health and environment. The Company is also a signatory of Responsible Care initiative of Indian Chemical Manufacturers Association and strives continuously to improve the overall SHE standards beyond statutory requirements.

Organic Chemicals and Fine and Speciality Chemicals

All the manufacturing facilities have adequate effluent treatment facilities. The treated water conforms to the required state pollution control board standards. The treated water is later sent to the common ETP for the respective industrial area. All the sites are qualified for ISO 9001. The Company is also a signatory of Responsible Care initiative of Indian Chemical Manufacturers Association and strives continuously to improve the overall SHE standards beyond statutory requirements.

The domestic and international market is handled separately in recognition of its characteristics and product portfolio.

Domestic Market – Constitutes about 50 to 55% of the Company's revenue. The major products here are from inorganic and organic segment with a few products from fine chemical segment. Marketing network consists of Head Office at Pune and has branches at Mumbai, Vadodara, Ahmedabad, Delhi and Hyderabad. The Company also has an established sales network to distribute some of the high volume, low cost products to small and medium sectors. Most of the corporate customers are handled directly by the Company's Marketing & Sales personnel. The general trend in Domestic Market is for monthly orders. Both, quantity and price can thus fluctuate in line with the market condition and the ability to pass on the cost based on the competitive environment.

Export Marketing – Export Marketing consists about 45 to 50% of the Company's revenue. The principal products are from organic intermediates and fine and speciality segment. Customers from Europe constitute around 60% followed by 15% in US and 25% in other parts of Asia. Marketing approach is to develop a long term relationship resulting into annual supply agreements. The Company has also undertaken exclusive development and manufacture of some advance intermediates specifically for a particular customer. These exclusive arrangements involve a multi year supply agreement with a mutually agreed pricing formula to take care of external fluctuations. The Company's customer base involves world's leading agro and speciality chemical companies. All the marketing is carried out directly with no intermediary agencies or representatives. This policy has also helped us not only to reduce the costs of marketing the product but the direct customer contact helps us to know the exact expectations on quality, packaging, supply, performance requirements, etc and also opens up new opportunities based on satisfactory performance.

Business Strategy

As a part of overall business strategy DNL diversified its business more into Fine & Speciality Chemicals and Organic segments. DNL's product portfolio span wide range of end use chemical sectors. All our products are either in top or second position in India. Majority of our products for international market also occupies a similar position. As a part of overall business strategy Deepak Nitrite Limited is putting efforts towards –

- Consolidation of manufacturing sites leading to better cost efficiencies.
- Adding one more stream of hydrogenation and nitration plants thereby deepening and widening its strength in organic chemicals field, and
- Investing in development and manufacture of high value fine chemicals.

The Company would also look into acquisition opportunities for businesses that strengthen its strategic position as above, by acquiring businesses across the value chain or laterally following similar technologies. The strategies for each of the segments are as given below-

i. Inorganic Intermediates –

Since these intermediates are essentially building blocks to a wide range of industries, such as dyestuffs, glass etc., the Company would capitalize on the marketing network so created to serve the industry with other add-on products.

The Company's plan to shift the Resorcinol plant closer to the Inorganic Intermediate facilities would help manage the inorganic by-products so recovered more efficiently thus helping consolidation.

ii. Organic Intermediates –

Company's expertise in Nitration, Chlorination, Hydrogenation will be leveraged to remain most competitive organic intermediate supplier. The Company is already the world's largest merchant supplier of Xylidines & Cumidines. Based on Company's experience in handling nitration and halogenation, the Company would add more products to this family largely for the international markets. The Company would also add facilities that would give us additional opportunity in managing difficult products for hydrogenation.

iii. Fine & Speciality Chemicals –

This business is largely based on Company's strength in Research and Development. The Company sees great opportunities as an outsourcing partner for a number of performance chemical companies internationally such as life science and effect chemical companies who seek near exclusive partnership for outsourcing their intermediate competitively. Based on the processes already developed, the Company would be more than doubling our present fine & speciality chemical businesses as well as adding other complimentary products for the same customers.

The Company's strategy would also require it to invest significantly in R&D upgradation including investments in Pilot Plants and Analytical facilities. A little over 10% of our investment is earmarked for R&D and Pilot Plant project. The Company hopes to double its strength in R&D.

iv. New Developments

The Company also intends to involve into CRAMs (Customer Research and Manufacturing Synthesis). Company's proposed R&D centre and pilot as well as semi-commercial multi purpose plants will enable it to carry on Customer Research and Manufacturing. The Company has already established relationship as a reliable supplier of complex products and we hope to built on this in the CRAMS area.

Based on its core strength in above processes and in-house research advantage, the Company want to grow in the Fine & Speciality and Organic segments.

KEY INDUSTRY REGULATIONS

The chemical manufacturing industry is governed by all the regulations relating to industries viz.

- a) Environment Control Acts
- b) Central Excise & Customs
- c) Factories Act and Labour Laws

There are various other statutes also like Sales Tax Act, approval from Department of Explosives for Storage of Petroleum Products, License for use of Boiler etc.

A Chemical manufacturing Company is required to obtain clearances under:

- a) Water (Prevention and Control of Pollution) Act 1974
- b) The Air (Prevention and Control of Pollution) Act 1981
- c) Environment Protection Act 1986.

The basic purpose of these statutes is to control, abate and prevent pollution. In order to achieve these objectives, Pollution Control Boards, or PCBs, which are vested with diverse powers to deal with water and air pollution, have been set up in each state. The PCBs are responsible for setting the standards of maintenance of clean air and water, directing the installation of pollution control devices in industries and undertaking investigations to ensure that industries are functioning in compliance with the standards prescribed. These authorities also have the power of search, seizure and investigation if the authorities are aware of or suspect pollution. All industries and factories are required to obtain consent orders from the PCBs, which are indicative of the fact that the factory or industry in question is functioning in compliance with the pollution control norms laid down. These are required to be renewed annually.

The issue of management, storage and disposal of hazardous waste is regulated by the Hazardous Waste Management Rules, 1989 made under the Environment Protection Act. Under these rules, the PCBs are empowered to grant authorization for collection, treatment, storage and disposal of hazardous waste, either to the occupier or the operator of the facility.

Overview of the Business of the Company

Deepak Nitrite Limited (DNL) – the flagship company of the Deepak Group of Companies – has come a long way since it was set up in the 1970s to support India’s drive towards self-sufficiency and import substitution. Today, revenues from its exports to over 20 countries, including the US, Japan, Korea and Europe, contribute almost 43% of its turnover of Rs. 321 crore. DNL has last year crossed turnover of Rs 138 crores in exports. For the year 2004-05, exports rose an impressive 23% over the previous year to close at Rs.138 crores, driven by the strong performance of exports of fine chemicals. However, the company has no plans to rest on its laurels and has already set sights on the next milestone of achieving global standards in Export and marking 50% of its turnover from exports.

DNL has three manufacturing facilities at different locations in the western part of India – one at Nandesari, Gujarat and two in Maharashtra at Taloja and Roha. The inorganic chemicals are produced only in Gujarat, while organic and fine & speciality chemicals are produced at the other facilities located across Gujarat & Maharashtra. One of the facilities is devoted to hydrogenation and reductive alkylation. In inorganic chemicals, the major products manufactured include nitrites, nitrates, blowing agents, hydroxylamine derivatives, while in organic chemicals the major products include nitrochlorobenzenes, nitrotoluenes, tolu-idines, DEMAP, resorcinol, xylidines and cumidines. While the company’s main strengths are in nitration, chlorination and hydrogenation, DNL also has the technical capabilities to carry out many other reactions at its plants.

Authority for the Present Issue

The present issue of Equity Shares with Detachable Warrants is being made pursuant to the Board Resolution passed at the Board of Directors meeting held on 16th December, 2005.

Basis of the Issue

The Equity Shares with detachable warrants are being offered on Rights basis to all the existing Equity Shareholders whose names appear as beneficial owners as per the list furnished by the depositories (in respect of the Equity Shares held in the electronic form) and on the Register of Members of the Company (in respect of Equity Shares held in the physical form) at the close of business hours on the Record Date February 28, 2006 fixed in consultation with the BSE (the Designated Stock Exchange).

Rights Entitlement

As your name appears on the Register of Members of the Company as an Equity Shareholder on February 28, 2006, being the Record Date, you are being offered the Equity Shares with detachable Warrants as shown in Part A of the enclosed Composite Application Form.

Entitlement Ratio

The Equity Shares are being offered on rights basis to the existing Equity Shareholders of the company in the ratio of two Equity Shares for every four shares held with detachable Warrants in the ratio of one detachable Warrant for every Two Shares allotted under the Rights Issue as on the Record Date.

Fractional Entitlement

For the Equity Shares with detachable Warrants being offered on Rights Basis under this issue, if the shareholding of any of the Equity Shareholders is not in the multiples of four (4), then the fractional entitlement of such holders for Equity Shares with detachable Warrants shall be rounded off to the next higher integer, subject to a minimum entitlement of ONE Equity Share.

The Equity Shares needed for rounding off will be adjusted from the Promoters' entitlement.

For Equity shares being offered on Rights Basis, for every two Rights Equity Shares allotted will entitle the shareholder to one detachable warrant. If the entitlement for the Equity shareholder is less than two, then the fractional entitlement of such holders for Warrants will be rounded off to the next higher integer.

Arrangement for disposal of odd lot

Since the shares of the Company are tradable in compulsory demat segment, the minimum trading lot is one Equity Share. Since the Company has made arrangements for fractional entitlements to be converted into whole integers, the Company has not made any arrangements for disposal of odd lots.

For shareholders seeking allotment in physical form, one single consolidated certificate shall be issued against their entitlement unless otherwise desired by the shareholder(s). The Company shall split the shares and return the same to the shareholder, into lots as specified and specifically requested in writing by the shareholder (who holds physical certificates) within 7 days from the date of receipt of such request by the Company.

Option to Investors to apply for Equity Shares and the detachable Warrants in dematerialised form

Applicants have the option to receive the Equity Shares and the detachable Warrants of the Company in the electronic form under the depository system. The Company has entered into a tripartite agreement with the Registrar to the Issue and CDSL and NSDL dated 23rd March 2000 and 6th April 2000 respectively, for dematerialisation of the securities being offered through this Rights Issue, to enable an investor to receive and trade in securities in dematerialized (electronic/demat) form, instead of holding Equity Shares and the detachable Warrants being issued in the form of physical certificates.

In this Rights Issue, an option is being provided to the shareholders to receive their Rights Equity Shares and the detachable Warrant in the form of an electronic credit to their beneficiary account with a depository participant instead of receiving these Equity Shares and the detachable Warrant in the form of physical certificates. Investor can opt for this facility by filling up the relevant particulars in the CAF.

Applicants may note that they have the option to subscribe to the rights Equity Shares and the detachable Warrants in demat or physical form, or partly in demat and physical form, in the same application in the space provided for the purpose. Separate applications for demat and physical are NOT to be made. If such applications are made, the applications for physical shares will be treated as multiple application and rejected accordingly. In case of partial allotment, allotment will be done in demat option for the shares sought in demat and balance, if any, will be allotted in physical shares.

Investors may please note that the Equity Shares and the detachable Warrants of the Company can be traded on the Stock Exchange only in demat form.

Procedure for opting for this facility for allotment of Equity Shares and the detachable Warrants arising out of this Issue in electronic form is as under:

Open a Beneficiary Account with any Depository Participant (care should be taken that the Beneficiary Account should carry the name of the holder in the same manner as is exhibited in the records of the Company. In case of joint holding, the Beneficiary Account should be opened carrying the names of the holders in the same order as with the Company). In case of Investors having various folios in the Company with different joint holders, the investors will have to open separate accounts for such holdings. This step need not be adhered to by those shareholders who have already opened such Beneficiary Account(s).

For shareholders holding shares in dematerialised form as on Record Date, the beneficial account number shall be printed on the CAF. For those who open accounts later or those who change their accounts and wish to receive their Rights Equity Shares and the detachable Warrants by way of credit to such account the necessary details of their beneficiary account should be filled in the space provided in the CAF. It may be noted that the allotment of Equity Shares and the detachable Warrants arising out of this Issue can be received in a dematerialised form even if the original Equity Shares of the Company are not dematerialised.

Nonetheless, it should be ensured that the Depository Account is in the name(s) of the shareholders and the names are in the same order as in the records of the Company.

Responsibility for correctness of applicant's age and other details given in the CAF vis-à-vis those with the applicant's Depository Participant would rest with the applicant. Applicants should ensure that the names of the applicants and the order in which they appear in CAF should be same as registered with the applicant's Depository Participant.

If incomplete/incorrect Beneficiary Account details are given in the CAF or where the investor does not opt to receive the Rights Equity Shares and the detachable Warrants in dematerialised form, the Company will issue Equity Shares and the detachable Warrants in the form of physical certificate(s).

The Rights Equity Shares and the detachable Warrants allotted to investors opting for dematerialised form, would be directly credited to the Beneficiary Account as given in the CAF after verification. Allotment advice, refund order (if any) would be sent directly to the applicant by the Registrar to the Issue but the confirmation of the credit of the Rights Equity Shares and the detachable Warrants to the applicant's Depository Account will be provided to the applicant by the applicant's Depository Participant.

Renounees can also exercise this option to receive Equity Shares and the detachable Warrants in the dematerialised form by indicating in the relevant block and providing the necessary details about their Beneficiary Account.

The Promoter and the promoter group intend to subscribe to unsubscribed portion if the Issue does not have subscription to the extent of 90% of the Issue size, after considering the above allotment, to ensure that the Issue is successful.

This acquisition of additional Equity Shares, if allotted to the Promoter shall be in terms of proviso to regulation 3(1)(b)(ii) of the Takeover Code and will be exempt from the applicability of regulation 11 and 12 of Takeover Code. This disclosure is made in terms of the requirement of Regulation 3(1)(b) of the Takeover Code. Further this acquisition will not result in change of control of management of the Company.

After such allotments as above and to the Promoters and the promoter group, including the application for rights/renunciation and additional equity shares, any additional Equity Shares shall be disposed off by the Board or committee of the Board authorised in this behalf by the Board of the Company, in such manner as they think most beneficial to the Company and the decision of the Board or committee of the Board of the Company in this regard shall be final and binding. In the event of oversubscription, allotment will be made within the overall size of the issue.
